# frogIT

Security and IT Solutions for the Peak District.

Learn more about our services and the products we offer.

About us

FrogIT provide Security and IT Solutions to both residential and commercial clients in the Peak District and the surrounding areas. We offer a range of services including intruder alarms, CCTV, WiFi and managed network solutions. We are a company that continues to keep up with the latest technology with a focus on quality, reliability and customer service.

Our team of fully qualified installers are able to complete installations quickly and efficiently, with minimal disruption. We hide all cabling wherever possible and ensure our products blend seamlessly with your environment to achieve a professional sleek look.

We provide great customer service. All of our installations link back to our managed service solutions, meaning we can provide over-the-air (OTA) firmware and security updates, and remotely troubleshoot any issues you might experience. It is this emphasis on customer service that have gained us additional customers through recommendations and referrals.

We install and maintain the following systems:

- Intruder alarms, including monitored systems.
- CCTV - both networked and analogue systems.
- Access control - single or multi door.
- Network infrastructure - High performance WiFi.
- PtP/PtMP - Connecting buildings without cables.
- Starlink - High speed satellite internet.
- VoIP - Business telephony solutions.
- ePOS - Modern Point of Sale for retail/hospitality.
- Smart Home - Automation of lighting and power.
- Livestock Monitoring - HD Video/Audio solutions

We will only install industry leading products from a range of specifically chosen manufacturers.

CCTV Solutions

HIKVISION

CCTV is crucial for ensuring effective security and safety. High-definition cameras provide clear and detailed footage, which can help in identifying suspects, preventing crime, and providing evidence in case of incidents. Clear images also aid in monitoring large areas and detecting unusual activity more accurately.

FrogIT offers a variety of solutions to match both customer requirements and budget. We will not install cameras which do not provide crucial details because in our opinion it serves no purpose.

All of our solutions include AI based threat detection which is processed locally, so your data, stays your data. We offer an always-free mobile app which works on iOS and Android devices to provide around the clock monitoring, and can even have your system monitored remotely by our preferred alarm receiving centre, NSI accredited to BS 8418, offering police response for CCTV systems.

We offer...

8MP
Equivalent to 4K

4MP
Equivalent to 2.7K

systems.

Stunning low-light imaging
F1.0 Super Aperture and advanced sensors ensure excellent colour imaging, even in ultra-low light conditions.

Super confocal lens
Designed with precision at micron level, allowing for master-level focus and high definition images.

Smart hybrid light
Three lighting modes offer colour, black & white or motion triggered colour imaging to suit virtually any environment.

WiFi & Network Solutions

UBIQUITI NETWORKS

In today's fast-paced digital world, a fast and reliable network is no longer a luxury - it's a necessity. Whether you're at home enjoying streaming, gaming, or connecting with family and friends, or in the workplace ensuring smooth operations and seamless communication, your WiFi and network are the backbone of everything you do. A good network ensures that you're always connected, productive, and able to enjoy everything the internet has to offer without interruption.

Investing in a high-performance network is about more than just avoiding technical issues—it's about ensuring that your home or business is always running at its best. With top-tier WiFi solutions, you'll experience fast speeds, reliable coverage, and peace of mind knowing that your connection is secure. Whether you're at home or in the office, staying connected is crucial, and a strong network makes it possible.

Our experts are qualified in networks, systems and cyber-security and we are able to provide and manage networks which deliver super high-performance and just work well. End of.

Networks are complicated. WiFi is complicated. Off-the-shelf solutions just do not work. It's for this reason, FrogIT are specialists in designing networks and implementing them, customised to your location. We'll complete a site survey and advise on the best solution to meet your requirements. From home WiFi, all the way to delivering high-density networks for pubs and cafes, even football stadiums. We do it all. Each time, customised for you.

We will implement application-aware firewalls and powerful VLAN configurations to keep your data secure. We can create guest hotspots to capture visitor data and encourage customers to sign up for marketing emails. The best part? We provide around the clock support, something not working? Let us know. We can perform remote diagnosis and get you back online quicker than ever.

We even work with a panel of Internet Service Providers (ISPs) to ensure we have the best connection possible to your premises, and where that's not possible, we can install high speed satellite internet, anywhere in the world.

Multi-WAN Support
Let us connect multiple internet sources together to act as backup to prevent downtime.

Secure remote management
Let our experts monitor your network and resolve issues before you even know about them.

Licence free SD-WAN
We can connect multiple locations together to act as a single physical network. No licences. No costs.

Impressively secure
Threat management, network segmentation and more included. Free of charge. Updated in real time.

Super performance
Our entry-level networking solutions boast the ability to handle over 300+ client devices and support connections up to 2.5Gbps. That's super quick.

frogIT

Starlink

High speed internet. Wherever you are.

We're proud installers of Starlink. The high speed satellite internet service from Space X. Starlink provides high speed internet to allow users to stream movies, make video calls, game online and more. The best part? Well, it works everywhere.

With Starlink, you can engage in activities which have historically not been possible with satellite internet. Space X operates the world's largest constellation of highly advanced satellites operating in low orbit around the Earth.

Starlink is offered on an Unlimited data basis, with no contracts. There are no long term commitments with Starlink.

Can I install Starlink myself? Sure. But we'd recommend a professional installation to ensure that you receive the best performance, that the satellite is properly secured and that the WiFi from the Starlink is distributed correctly around your premises.

What is the built-in WiFi like? It's no secret that the built-in WiFi from the Starlink device isn't great. A quick Google search will show this. We recommend pairing Starlink with some of our high performance access points for the best experience.

What are the contract terms? None. Starlink bills its customers on a monthly rolling subscription. You can stop your subscription anytime, just remember to pause or cancel the subscription before your next billing date.

Is Starlink good enough for working from home/video calls/gaming? Yes. Starlink advertise an availability of >99% with expected download speeds of 25-250Mbps, but we generally see customers getting around 300Mbps down with around 25ms latency. This is great.
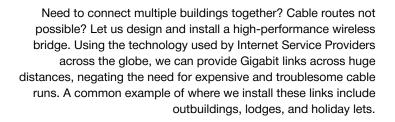

Intruder Alarms

We can design and install Grade 2 compliant intruder alarms, and even provide around-the-clock monitoring from our partner Alarm Receiving Centre (ARC) who are NSI Gold accredited. Our intruder alarm solutions protect both the inside and outside of your property, with advanced external detection to alert you to intruders before the break-in.

Our alarms are owned by you, and require no subscription for continued use. We can provide 4G backup for alarm communications, remote monitoring and a easy-to-use mobile app for arming and disarming your alarm from anywhere in the world.

PtMP & PtP

Need to connect multiple buildings together? Cable routes not possible? Let us design and install a high-performance wireless bridge. Using the technology used by Internet Service Providers across the globe, we can provide Gigabit links across huge distances, negating the need for expensive and troublesome cable runs. A common example of where we install these links include outbuildings, lodges, and holiday lets.

Our solutions are monitored around the clock by our engineering team and we provide remote diagnosis and firmware updates where applicable.

VoIP

We specialise in designing, installing, and supporting state-of-the-art business phone systems tailored to your needs. Our fully supported enterprise cloud PBX solution provides seamless, hassle-free communication with flexible pay-monthly options.

Benefit from advanced features such as call routing, call recording, and crystal-clear calling from any device, anywhere. Simplify your business communications with a reliable system that keeps your team connected, productive, and stress-free.

With our expert support, you can focus on growing your business while we handle the rest.
